Output

Model

##
## Call:
# train.kknn(formula = fmla, data = ivory.train, kmax = 15, distance = 2, kernel = knl)
##
## Type of response variable: nominal
## Minimal misclassification: 0.1889986
## Best kernel: triangular
## Best k: 14

Classifier: region
Map of best fitted reference sample

Best fitted reference sample:
- Site: Cameroon, Lokundji
- Country: CM
- Region: Central Africa
- CITES: Appendix I
- Lat: 3.13
- Lon: 10.2
Assignment of test sample to nearest neighbours

![Graph showing assignment of test sample to nearest neighbours using Euclidean distance and weight of k-NN. The graph displays data points with locations indicated as Central Africa.

Best fitted reference entries

Table 2: Details of best fitted reference entry (row 1) and other fitted entries within best classifier

Region of prediction: Central Africa
Testing robustness of assignment: Wilcoxon signed rank test

If p-value > 0.05, the test concludes that the isotope signature of the test sample is similar to the respective nearest neighbour reference sample.

P-values for the k nearest neighbours in Wilcoxon Test

“0.9809717, 0.5826437, 0.0762709, 0.0331540, 0.0291029, 0.0124674, 0.0077959, 0.0018749, 0.0010194, 0.0003301, 0.0000678, 0.0000030, 0.0000004, 0.0000001”

Goodness of fit of test sample:

- good fit: if p > 0.05 for at least two tested nearest neighbour reference samples;
- moderate fit: if p > 0.05 for at least one tested nearest neighbour reference samples;
- uncertain: if p > 0.05 for none of the tested nearest neighbour reference samples.

Assumption: At least two nearest reference samples are available.

Overall goodness of fit of test sample: “good fit”
