Spatial assignment of test sample

Contents

Input
- Isotope values of test sample .................................................. 1

Output
- Model ............................................................................. 1
- Map of best fitted reference sample ........................................ 2
- Best fitted reference entries .................................................... 3
- Testing robustness of assignment: Wilcoxon signed rank test .......... 3
  - P-values for the k nearest neighbours in Wilcoxon Test ............... 3
  - Goodness of fit of test sample: .............................................. 4

Input

Website Identifier: 124

Isotope values of test sample

Table 1: Isotope values of test sample

<table>
<thead>
<tr>
<th>13C/12C</th>
<th>15N/14N</th>
<th>18O/16O</th>
<th>2H/1H</th>
<th>34S/32S</th>
</tr>
</thead>
<tbody>
<tr>
<td>-21.1</td>
<td>7</td>
<td>15.8</td>
<td>-39.4</td>
<td>4.2</td>
</tr>
</tbody>

Output

Model

##
## Call:
## train.kknn(formula = fmla, data = ivory.train, kmax = 15, distance = 2, kernel = knl)
##
## Type of response variable: nominal
## Minimal misclassification: 0.3765867
## Best kernel: triangular
## Best k: 15

Classifier: country_code
Map of best fitted reference sample

Best fitted reference sample:
- Site: Mozambique, Chipupa / Rovuma
- Country: MZ
- Region: Southern Africa
- CITES: Appendix I
- Lat: -11.26
- Lon: 38.91
Assignment of test sample to nearest neighbours

Best fitted reference entries

Table 2: Details of best fitted reference entry (row 1) and other fitted entries within best classifier

Country of prediction: MZ

Testing robustness of assignment: Wilcoxon signed rank test

If p-value > 0.05, the test concludes that the isotope signature of the test sample is similar to the respective nearest neighbour reference sample.

P-values for the k nearest neighbours in Wilcoxon Test

“0.35355, 0.23401, 0.10231, 0.05677, 0.01048, 0.00506, 0.00042”
Goodness of fit of test sample:

- good fit: if p > 0.05 for at least two tested nearest neighbour reference samples;
- moderate fit: if p > 0.05 for at least one tested nearest neighbour reference samples;
- uncertain: if p > 0.05 for none of the tested nearest neighbour reference samples.

Assumption: At least two nearest reference samples are available.

Overall goodness of fit of test sample: “good fit”
